CONTENTS

Editorial vii

The X ray anomalous dispersion corrections and their use for the characterization of materials 1
D. C. CREAGH

Diffuse X-ray scattering from crystals 47
H. JAGODZINSKI

Single crystal diffraction studies of stacking faults in close-packed structures 103
M. T. SEBASTIAN and P. KRISHNA

Some applications of pattern fitting to powder diffraction data 185
J. I. LANGFORD

Recent methods and applications of X-ray fluorescence analysis 213
M. MANTLER

X-ray diffraction on single crystals at high pressure 263
H. AHSBAHS

Single crystal X-ray diffraction studies of materials at high temperature 303
H. SCHULZ

Characterization of the perfection of large single crystals by means of γ-ray diffractometry 315
J. R. SCHNEIDER and H. A. GRAF

X-ray topography of twinned crystals 367
H. KLAPPER

Real-time and stroboscopic topography 403
B. K. TANNER and J. K. CRINGEAN

X-ray topographic studies of phase transition in crystals; the α–β transition of quartz 425
N. KATO and K. GOUHARA

The simulation of X-ray topographic images 465
Y. EPELBOIN

Subject index 507

Compound index 513
